

FIBERCELL PRIME MEDIUM PAPER - FORESTRY

The Prime Medium Paper is suitable for crops with both shorter and longer propagation times. It is used by many forest nurseries around the world and is especially effective for propagating forest seedlings in both tropical and sub-tropical conditions. This paper works well for different tree species, such as pine and eucalyptus, providing a paper plug structure that promotes consistent root development and optimal moisture retention—essential for successful establishment of high-quality seedlings.

Key benefits with our Prime Medium paper:

- The paper allows for good lateral root development and effective air pruning
- Made from cellulose sourced from responsibly managed forests
- Propagation time from 4 – 12 months
- Easy to handle and suitable for sorting and spacing

Specifications FiberCell PRIME "Medium"	
Segment	Pine, Eucalyptus, Acacia & Teak
Propagation time	4 - 12 months (Depending on soil and climate conditions)
Degradable	Yes
Certifications	FSC-C139107
